

Instructions

Indoor use only. Use in 15cm/5.9in - 25cm/10in pots. Follow instructions carefully.

1. VERY IMPORTANT

Dip the capillary wick at the bottom of the stake in water for 5 seconds. This prevents water from entering the middle tube and activates the moisture sensor.

2. Fill the globe with water and screw the stake to the globe. (add liquid plant food during the growing season). You can also wet the soil to give the plant extra water.

3. If soil is fresh or soft, push the stake into the soil. If soil is compacted, create a hole with an object before inserting the stake.

Plantpal encourages healthy plant growth all year round and the rate at which water is used depends on the dryness of the soil, size of plant and season of the year.

When refilling, follow instructions and shake out any water from the middle tube of the stake.

KEEP OUT OF DIRECT SUNLIGHT.
